1 Draft

We look for a numerical solution for

$$\vec{E} = E_0 U(x, y) e^{i(\omega t - \beta z)} \hat{y}$$

in a waveguide with varying refractive indices along the \hat{x} and \hat{y} axes.

$$\begin{split} \frac{\partial^2 U}{\partial x^2} + \frac{\partial^2 U}{\partial y^2} - \beta^2 U &= -\mu \epsilon \omega^2 U \\ \frac{\partial^2 U}{\partial x^2} + \frac{\partial^2 U}{\partial y^2} + \mu \epsilon \omega^2 U &= \beta^2 U \\ \frac{\partial^2 U}{\partial x^2} + \frac{\partial^2 U}{\partial y^2} + n(x, y)^2 k_0^2 U &= \beta^2 U \end{split}$$

Making the above discrete gives us

$$\frac{U_{i+1,j} + U_{i-1,j} - 2U_{i,j}}{\Delta x^2} + \frac{U_{i,j+1} + U_{i,j-1} - 2U_{i,j}}{\Delta y^2} + n_{i,j}^2 k_0^2 U_{i,j} = \beta^2 U_{i,j}$$

 $\Delta y \to \Delta x$

$$U_{i+1,j} + U_{i-1,j} - 2U_{i,j} + U_{i,j+1} + U_{i,j-1} - 2U_{i,j} + n_{i,j}^{2} \Delta x^{2} k_{0}^{2} U_{i,j} = \beta^{2} \Delta x^{2} U_{i,j}$$

$$U_{i+1,j} + U_{i-1,j} - 4U_{i,j} + n_{i,j}^{2} \Delta x^{2} k_{0}^{2} U_{i,j} + U_{i,j+1} + U_{i,j-1} = \beta^{2} \Delta x^{2} U_{i,j}$$

$$U_{i+1,j} + U_{i-1,j} + (n_{i,j}^{2} \Delta x^{2} k_{0}^{2} - 4) U_{i,j} + U_{i,j+1} + U_{i,j-1} = \beta^{2} \Delta x^{2} U_{i,j}$$

Let $\alpha_{i,j} = (n_{i,j}^2 \Delta x^2 k_0^2 - 4)$

$$U_{i+1,j} + U_{i-1,j} + \alpha_{i,j}U_{i,j} + U_{i,j+1} + U_{i,j-1} = \beta^2 \Delta x^2 U_{i,j}$$
(1)

 $\begin{array}{l} U \text{ is an } m \times n \text{ matrix. } m \text{ rows, } n \text{ columns.} \\ U_{i,j} \text{ is the } i^{th} \text{ row, } j^{th} \text{ column. } (1 \leq i \leq m), (1 \leq j \leq n). \end{array}$

We want to rewrite matrix U as a column vector V. $U_{l,k} \mapsto V_{m(k-1)+l}^*$.

$$\mathbf{U} = \begin{bmatrix} a_{11} & a_{12} & a_{13} & \dots & a_{1n} \\ a_{21} & a_{22} & & & \vdots \\ a_{31} & & & & \vdots \\ \vdots & & & \ddots & \vdots \\ a_{m1} & a_{m2} & \dots & \dots & a_{mn} \end{bmatrix} \Rightarrow \begin{bmatrix} a_{11} \\ a_{21} \\ \vdots \\ a_{m1} \\ \vdots \\ a_{m2} \\ \vdots \\ a_{mn} \end{bmatrix} = \mathbf{V}$$

Figure 1: Mapping U to V

The map is 1-1 because,

Suppose
$$m(k'-1)+l'=m(k-1)+l,$$

 $\Rightarrow m(k'-k)=l-l',$
then $|m(k'-k)|\leq m-1$, since $|l-l'|\leq m-1$,
 $|k'-k|\leq \frac{1}{m}-1$
 $\Rightarrow l=l'\Rightarrow k=k'.$

Note that indices i and j of U both start at 1 implies the index of V starts at 1. Below is a tabulation of indices appearing in equation 1 to see what index of V it maps to.

Table 1: Index Table

k	1	m(l-1) + k	
i + 1	j	mi + j	m(j-1) + i + 1
i - 1	j	m(i-2) + j	m(j-1) + i - 1
i	j	m(i-1) + j	m(j-1) + i
i	j+1	m(i-1) + j + 1	m(j-1) + i + m
i	j-1	m(i-1) + j - 1	m(j-1) + i - m

Equation 1 becomes

$$V_{m(j-1)+i+1} + V_{m(j-1)+i-1} + \alpha_{i,j} V_{m(j-1)+i} + V_{m(j-1)+i+m} + V_{m(j-1)+i-m} = \beta^2 \Delta x^2 V_{m(j-1)+i}$$

rewrite in increasing index order,

$$V_{m(j-1)+i-m} + V_{m(j-1)+i-1} + \alpha_{i,j} V_{m(j-1)+i} + V_{m(j-1)+i+1} + V_{m(j-1)+i+m} = \beta^2 \Delta x^2 V_{m(j-1)+i}$$
 (2)

The index on the first and last terms tells us that this relationship isn't valid for every entry V_k . So we must find the upper and lower indices for which this relationship is valid; and manually find the other

entries. The lowest index has to be ≥ 1 . The highest index $\leq mn$. By substituting p = m(j-1) + i,

$$V_{p-m} + V_{p-1} + \alpha_{i,j}V_p + V_{p+1} + V_{p+m} = \beta^2 \Delta x^2 V_p$$
(3)

we can see that $m+1 \le p \le m(n-1)$.

Now we manipulate inequalities to find out which (i,j)'s correspond to these limits. Note that k = k(i,j) = m(j-1) + i is also an increasing function of both i and j, (i.e. $\frac{\partial k}{\partial i}, \frac{\partial k}{\partial j} > 0$), so after finding (i,j)'s satisfying the above, we will know which other one's to exclude. Equations 4 and 5 shows that (3) applies to the inner columns of matrix U.

$$m(j-1) + i - m \ge 1$$

$$m(j-2) + i \ge 1$$

$$[i=1, j=2]$$

$$(4)$$

$$m(j-1) + i + m \le mn$$

$$m(j-n) + i \le 0$$

$$[i = m, j = n-1]$$
(5)

The outer column entries (of matrix U) equal zero because they are boundaries. We now have an eigenvalue problem of an $m(n-2) \times m(n-2)$ matrix. Equation 3 gives the following matrix.

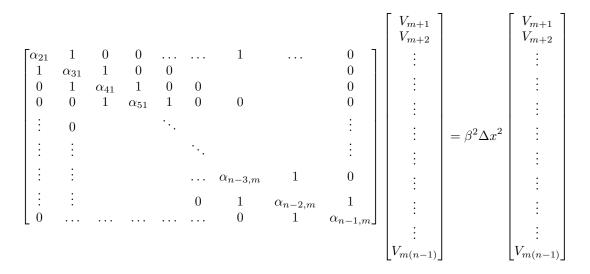

Figure 2: Eigen Matrix
